NEWBOOKS SOLUTIONS
Software & Catalogue Data for the Publishing Industry

NEWBOOKS Solutions and BDS cooperate

COLOGNE/Dumfries – Together with BDS, we provide the largest bibliographic catalogue for English-language publications in the international publishing industry. More than 25 million fully enriched and editorially classified publications include print and e-books, audiobooks, film, music and video games.

Booksellers and information service providers receive data licenses via Newbooks. These depend on whether the catalogue data is used as raw data or in connection with the SaaS solutions "Newbooks.biz eProcurement" or "Approval Plan System".

Catalogue Raw Data or Web Service
Our clients receive the data typically as catalogue raw data or integrate it via web service into their own systems, for example into web shops. Unlike in the case of other metadata vendors, no additional fee is charged for using the data in the public domain.

Managed Software "Approval Plan" & "eProcurement"

Moreover, we offer the use of BDS' metadata within our SaaS solutions "Approval Plan" and "Newbooks.biz". These systems are designed in the corporate design of the respective bookseller or service provider; they use the system to serve libraries, companies and institutions of public authorities.

If additional data licenses are available - for example for the Newbooks' journal database or the catalogue of Libri/Ingram - these can simply be activated. The SaaS solutions are tailored to corporate booksellers and library suppliers with regular customers and are constantly being further developed.

Benefits of BDS' high-quality metadata:

- **Comprehensive –** Coverage of the entire English-speaking media market
- **Enriched –** All standard classification schemes (Thema, BIC, BISAC, LCC, LCSH, DDC)
- **Flexible –** Tailored data exports for booksellers and service providers
- **Timely –** Daily incremental updates through close cooperation with publishers
- **Efficient –** Catalogue raw data or usage within Newbooks SaaS solutions
- **Seamless –** Data exports in all standard formats (e.g. ONIX, MARC21)
- **Approval Plan System –** Profile-based acquisition proposals for librarians
- **Alma/SISIS/Aleph –** Adaptability for all internationally used library systems

About BDS

Founded in 1995 by Lesley Whyte and Eric Green, Bibliographic Data Services quickly established itself as the foremost supplier of quality metadata to libraries. The company has held the British Library Catalogue in Publication (CIP) Programme contract since 1995, providing core services to the British Library, and supplies all UK public libraries, many academic libraries and libraries around the world.

About NEWBOOKS Solutions

NEWBOOKS Solutions is one of the German publishing industry's leading software providers, developing solutions for all sectors of the publishing industry at a time of rapid transformation driven by digitization. The company is focused on developing and administering systems for publishers, booksellers, wholesalers, library suppliers and consortia in both the German and international markets.
