SOLUTIONS**

in cooperation with

# The BDS Catalogue

Together with BDS, we provide the largest bibliographic catalogue for English-language publications in the international publishing industry. More than 28 million fully enriched and editorially classified publications include print and e-books, audiobooks, film, music and video games.

Booksellers and information service providers receive data licenses via Newbooks. These depend on whether the catalogue data is used as raw data or in connection with the SaaS solutions "Newbooks.biz eProcurement" or "Approval Plan System".

## SaaS Solutions "Approval Plan" & "Newbooks.biz"

We offer the use of BDS' metadata within our SaaS solutions "Approval Plan" and "Newbooks.biz". These systems are designed in the corporate design of the respective library supplier/corporate bookseller or service provider; they use the system to serve libraries, companies and institutions of public authorities.

## Benefits of BDS' High-Quality Metadata:

- > Comprehensive – Coverage of the entire English-speaking media market
- > Enriched – All standard classification schemes (Thema, BIC, BISAC, LCC, LCSH, DDC)
- > Flexible – Tailored data exports for booksellers and service providers
- > Timely – Daily incremental updates through close cooperation with publishers
- > Efficient – Catalogue raw data or usage within Newbooks SaaS solutions
- > Seamless – Data exports in all standard formats (e.g. ONIX, MARC21)
- > Approval Plan System – Profile-based acquisition proposals for librarians
- > Alma/SISIS/Aleph – Adaptability for all internationally used library systems

**28 MIO.  
FULLY ENRICHED  
ENGLISH LANGUAGE PUBLICATIONS**

“ BDS' recognised expertise in the constantly evolving world of bibliographic standards means we can be sure their records will meet our demanding quality requirements. ”
